Department of Computer Science and Statistics University of Rhode Island

Spring 2024

Number Systems

Number systems

- · A way to represent numbers
 - ✓ numbers are expressed in a certain base
- · Why study number systems in CS?
 - √ to understand data representation
- Examples of number systems
 - √ binary
 - √ decimal
 - ✓ octal
 - √ hexadecimal

Positional number systems

assuming base **b**:

...
$$d_2b^2 + d_1b^1 + d_0b^0 + d_{-1}b^{-1} + d_{-2}b^{-2}$$
...

$$43.23 = 4 \cdot 10^{1} + 3 \cdot 10^{0} + 2 \cdot 10^{-1} + 3 \cdot 10^{-2}$$

4

Decimal number system

- Base 10
- · Symbols

0123456789

$$456 = 4 \cdot 10^2 + 5 \cdot 10^1 + 6 \cdot 10^0$$

Binary number system

- Base 2
- · Symbols

0 1

Most Significant Bit Least Significant Bit

$$1010 = (1 \cdot 2^3) + (0 \cdot 2^2) + (1 \cdot 2^1) + (0 \cdot 2^0)$$

Binary to Decimal?

100101000

2 ⁰	21	22	23	24	2 ⁵	2 ⁶	2 ⁷	28
1	2	4	8	16	32	64	128	256

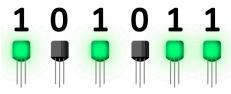

Try these ..

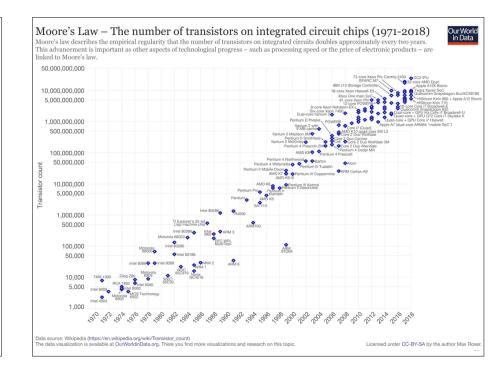

What is a **bit**? What is a **byte**?

8

Bits and computers

- A bit can only have two values (states)
 - ✓ easy to embed into physical devices
- **Transistor**
 - ✓ processors have billions of transistors
 - √ transistors can be switched **on** and **off**

Decimal to other bases

- · Repeatedly divide by base
 - ✓ collect remainders
 - \checkmark output in reverse order

57₁₀

 $\sqrt{1} / 2 = 0 R 1$

111001₂

Hexadecimal number system

- Base 16
- · Symbols

0123456789ABCDEF

$$4A1C = (4 \cdot 16^3) + (10 \cdot 16^2) + (1 \cdot 16^1) + (12 \cdot 16^0)$$

12

Hexadecimal to decimal

1 D Bx16

A 0 1 0 F

Binary to hexadecimal

10011101 11010011 1111111

Humans think in base 10. Computers think in base 2. Humans use base 16 to easily manipulate data in base 2.

13

Color codes

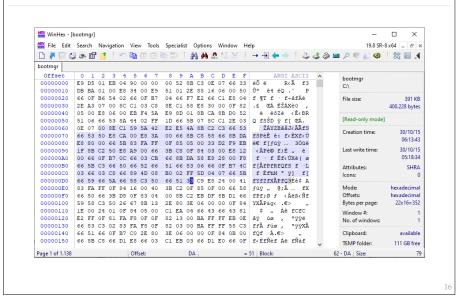

Shades of yellow color chart

Colo	. HTML / CSS Color Name	Hex Code #RRGGBB	Decimal Code (R,G,B)
	lightyellow	#FFFFE0	rgb(255,255,224)
	lemonchiffon	#FFFACD	rgb(255,250,205)
	lightgoldenrodyellow	#FAFAD2	rgb(250,250,210)
	papayawhip	#FFEFD5	rgb(255,239,213)
	moccasin	#FFE4B5	rgb(255,228,181)
	peachpuff	#FFDAB9	rgb(255,218,185)
	palegoldenrod	#EEE8AA	rgb(238,232,170)
	khaki	#F0E68C	rgb(240,230,140)
	darkkhaki	#BDB76B	rgb(189,183,107)
	yellow	#FFFF00	rgb(255,255,0)
	olive	#808000	rgb(128,128,0)
	greenyellow	#ADFF2F	rgb(173,255,47)
	yellowgreen	#9ACD32	rgb(154,205,50)

What is the color code of 'greenyellow' in **binary**?

Forensic Analysis

31 oct = 25 dec?

Going back to C++ ...

17

Integer literals in C++

```
int d = 42;
int o = 052;
int x = 0x2a;
int X = 0X2A;
int b = 0b101010; // C++14
```

- decimal-literal is a non-zero decimal digit (1, 2, 3, 4, 5, 6, 7, 8, 9), followed by zero or more decimal digits (0, 1, 2, 3, 4, 5, 6, 7, 8, 9)
- octal-literal is the digit zero (0) followed by zero or more octal digits (0, 1, 2, 3, 4, 5, 6, 7)
- hex-literal is the character sequence 0x or the character sequence 0X followed by one or more hexadecimal digits (0, 1, 2, 3, 4, 5, 6, 7, 8, 9, a, A, b, B, c, C, d, D, e, E, f, F)
- **binary-literal** is the character sequence **0b** or the character sequence **0B** followed by one or more binary digits (0, 1)
